

Another Sky Climber Reference!

Bayat Towers, Saudi Arabia

- DIVISION:** Sky Climber Spain - BMU and PI Division
- PROJECT NAME:** Bayat Towers, Kingdom of Saudi Arabia
- APPLICATION:** BMU (Building Maintenance Unit), Window Cleaning

The Bayat Plaza Towers are twin prominent residential towers located in the heart of Jeddah. Sky Climber was selected to provide the façade maintenance systems for the sleek external architecture of these two prestige residential buildings.

Typically for the Middle East, the roof terrace is surrounded by a 4m high parapet to conceal all the air-conditioning equipment. The difficulty for Sky Climber was to design a BMU that could reach over the 4m high parapet and circulate in a very narrow corridor around the perimeter of the building. The solution was to design a specific BMU with a double jib and a compact body capable of circulating in the required runway.

In addition, the BMU is equipped with an Auxiliary hoist (or GRU) with a very high lifting capacity of 500Kg to allow the replacement of particularly large glass panels on the facade.

Vertical run	150 m
Model	BMU model S2-21.145
Self-weight	4000 Kg
Type of jib	Double jib
Cradle rated load	240 Kg
Hoisting	Multilayer
Regulation	EN1808 – ISO 9001
