

# Another Sky Climber Reference!

*Harbour Lights with Helicopter Platform, Europoort Rotterdam, Netherlands*

**DIVISION:** Sky Climber Europe

**PROJECT NAME:** Harbour Lights with Helicopter Platform - Europoort Rotterdam, Netherlands

**APPLICATION:** Renovation & Concrete Repair Work

In order to repair and conserve the concrete columns of the harbour lights and the underside of the helidecks, several combinations of Sky Climber Light Weight Stage platforms have been used.

Due to the limited load-carrying capacity of the helideck – which should remain accessible at all times – the lightest temporary suspended access platform – the Sky Climber Light Weight Stage with Compact 400 Hoists has been selected to do the job. By shifting the platform, the entire helideck could be accessed.

In order to repair the concrete column a round shaped Light Weight Stage with 4 CX500 hoists has been used.

<b>Vertical Run</b>	30m
<b>Type of platform</b>	Light Weight Stage with end stirrups and Walk Through Stirrups for round platform
<b>Length of cradle</b>	Variable sizes
<b>Cradle rated load</b>	Variable loads
<b>Type of hoist</b>	Compact 400m and CX500 with Sky OL
<b>Norms</b>	EN1808
