

SKY CLIMBER®

New
Product

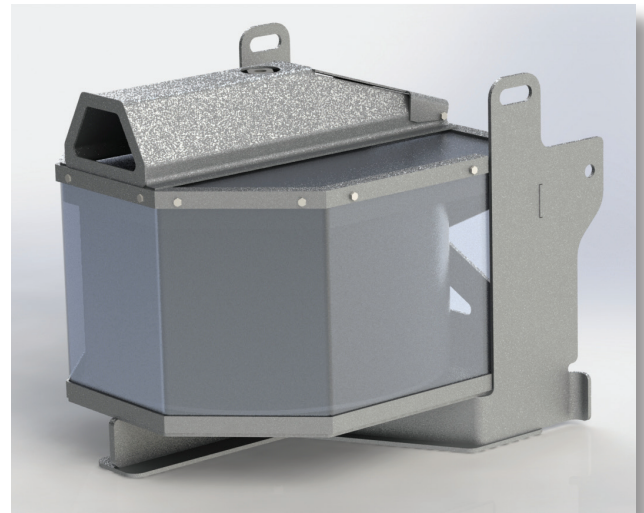

HIGH-CAPACITY Passive Wire Winder

This new Passive Wire Winder will accommodate up to 750 feet of wire rope, making taller drops possible.

The High-Capacity Passive Wire Winder is compatible with any Sky Climber LNX or Compact-series personnel hoist, and can be used with material lifting systems as well.

With its increased capacity, these wire winders will add versatility to your fleet. They mount on connecting frames at the end of standard SSU (Sky Stage Ultra) platforms and installation takes just minutes with pin connectors.

The High Capacity Passive Wire Winder includes a guide spring for use with Sky Climber Compact-series hoists. This guide spring is not necessary when used with LNX models.

Specifications

Part Number	4308-1000
Weight	75 pounds
Capacity	750 feet
Construction	Aluminum
